About Us

"Family run since 1983"

Three generations of the founding family work at the yard, warehouse and office facility on the outskirts of Leicester. If you stick a pin in a map of England, our geographical location is pretty much smack bang in the middle.

"Being right on the side of the A46 gives us quick access to the M1 and the rest of the country"

A to Z operate a varied transport and haulage fleet with the aim of providing the most suitable vehicle to meet our clients needs. The composition of the fleet is regularly reviewed and upgraded to meet customer requirements and current best practices.

Our fleet includes front and rear mounted crane vehicles from 3.5t up to 26t with a range of lifting capabilities.

26tn canopied vehicles with on-board 2.5tn capacity 4 way forklift. Curtain sides with roll tops or concertina and tail-lifts, flat beds and vans of various sizes - we've got the lot!

"We park all our trucks inside, this keeps customers goods safe and warm and our drivers aren't scraping ice off windows."

A to Z Transport holds a FORS Silver accreditation and can provide vehicles to meet the requirements of Crossrail, CLOCS and WRRR.

Flat-bed vehicles are fitted with fall protection equipment. Our experienced lorry mounted crane operators carry a CSCS card which entitles them to operate on most building sites.

26tn Curtains

Our biggest curtain side offering at 26tn gross makes moving heavy palletised goods of all shapes and sizes easy. Also fitted with retractable curtain roofs and retractable full curtains, offloading with site cranes is easy. We have multiple variants at this size so please view our data table below for our maximum load sizes.

We also operate vehicle mountable manitou fork lifts to make loading and offloading even easier with these vehicles. We've also added a 9.3m bed length vehicle with tuck-away tail lift.

Configuration	Metric
Max. Load (without fork lift attached)	15tn
Max. Load (with fork lift attached)	13tn
Max. Lift of Fork Lift	2.5tn
Max. Bed Length	9.3m
Max. Bed Width	2.5m
Max. Internal Height	2.85m
Tail Lift Capacity	1.5t
Vehicle Dimensions (L x W x H)	12m x 2.5m x 3.85m

26tn HIAB

Offering even more flexibility we have 26tn rigid flatbed vehicles with lorry mounted HMF cranes. All our drivers are fully ALLMI Lorry Loader trained and hold valid, up to date ALLMI CSCS cards.

All cranes have a fully up to date record of thorough examination on file and are fully risk assessed.

With cab mount and rear mount variants we are sure to have the right crane to meet your loading and offloading needs.

Configuration	Metric	Crane Reach	Max. Lift @ reach
Max. Load	11.5tn	4.5m	5.5tn
Max. Bed Length	8.3m	6.4m	3.7tn
Max. Bed Width	2.5m	8.3m	2.8tn
Bed Height from ground level	1.2m	10.3m	2.2tn
Vehicle Dimensions (L x W x H)	12m x 2.5m x 3.85m	12.4m	1.8tn

18tn Variants

Though 18tn gross, our next sized vehicles are still versatile. Curtain side variants with tail lifts and also a flatbed version with rear mount crane. Newly added to the fleet an 18tn curtain variant with cab mount crane and retractable curtain! Though smaller, these vehicles are ideal when site access is tight and offloading is tricky.

We can crane off from our canopied vehicles! These vehicles are the meaning of “right tool, right job”! Keeping the load dry and safe from the weather in transit yet self offloading – perfect!

Configuration	Metric	Crane Reach	Max. Lift @reach
Max. Load	8tn*/6tn**/6.5t***	4.4m	3.9tn
Max. Bed Length	7.8m*/6.6m**/7m***	6.3m	2.6tn
Max. Bed Width	2.5m	8.3m	1.9tn
Bed Height from ground level	1.2m	10.4m	1.5tn
Vehicle Dimensions (L x W x H)	10.6m x 2.5m x 4.2m* / 3.4m** / 4.2m***		

Our Cab Mount and Rear Mount cranes are configured for varied job types so if in doubt about the best option for your offloading needs get in touch and we'll happily advise.

* Curtain Side / ** Rear Mount Crane / *** Cab Mount Crane with Curtain

15tn Variants

At the 15tn size we have flatbed vehicles with HMF cab mounted cranes but still at over 6m in bed length more specialist loading and offloading.

Adding another level of flexibility.

ALL our vehicles come with Direct Vision Standard and Progressive Safe System equipment with all round camera's, side scan technology, white noise reversing sirens, moving off sensors and beacons all round.

Configuration	Metric	Crane Reach	Max. Lift @ this reach
Max. Load	6tn	4.3m	2.7tn
Max. Bed Length	6.5m	6.2m	1.8tn
Max. Bed Width	2.5m	8.2m	1.3tn
Bed Height from ground level	1.2m	10.4m	1tn
Vehicle Dimensions (L x W x H)	10m x 2.5m x 3.3m		

3.5tn Variants

They may be some of our smallest vehicles but they still work hard. With flatbed and mini crane variants even the lightest loads are made easy.

All have 4m bed lengths at 2m wide so they still pack a load in.

Our mini cab mount crane makes offloading these smaller loads easy and can get where the larger HGV's can't - making it even more versatile.

Configuration	Metric	Crane Reach	Max. Lift at this reach
Max. Load	1.2tn* / 900kg**	2.3m	900kg
Max. Bed Length	4m	3.3m	780kg
Max. Bed Width	2m	4.2m	600kg
Bed Height from ground level	1m		
Vehicle Dimensions (L x W x H)	7m x 2m		

The lifting capacity of this crane depends on the size of the load, particularly it's height as well as it's weight. For an up to date quote or advice get in touch and we'll happily quote.

* Flatbed / ** Crane Vehicle

Van Range

Looking for a practical, cost-effective transport solution that does it all?

Our **6-seater van with a rear goods compartment** gives you the best of both worlds — comfortable passenger space and secure cargo storage in one smart vehicle.

Whether you're:

- Moving a team to a job site
- Transporting staff and equipment together
- Heading to an event with gear
- Managing a small business delivery

This van keeps everything organized and efficient. The separate rear goods compartment protects tools, luggage, or stock from passenger space, improving safety, comfort and security.

Why choose our van?

- Seats up to 5 passengers comfortably
- Dedicated rear storage area for tools, equipment or goods
- Cost-effective alternative to hiring multiple vehicles
- Ideal for businesses, contractors, event teams, and group travel
- Clean, reliable and ready to go

One vehicle. One journey. Everything you need.

Configuration	Passenger Vehicle
Max. Load	800kg
Number of Seats	2
Loading Bed Length	1.8m
Loading Bed Width	1.3m
Loading Bed Height	1.3m
Can Carry Passengers	✓ 5
Vehicle Dimensions (L x W x H)	4.8m x 2m x 1.9m

Accreditations & Safety

All our vehicles meet and exceed the Progressive Safe Standard

FORS ID: 001509

Lorry Loaders, Slinger Signallers,
Appointed Person and Lorry Loader Trainer

Lifting Plans

All our crane vehicles come with valid and in date Report of Thorough Examination and Lifting Certification. We can supply:

- **Generic Lifting Plan**

These are for basic, non complex, everyday lifts on site. These tend to be completed by the driver on the day of the delivery.

- **Basic Lifting Plan**

These form the basis for a non complex to medium risk lift. These are produced by our in house ALLMI Accredited Appointed Person via two way information exchange. These often form part of a structured and well planned lift on site where there are more advanced risks to people or property than a Generic Lifting Plan.

- **Complex Lifting Plan**

These are often needed for complex lifts or on busy sites where there is an even greater risk to people or property. They often involve our Appointed Person visiting site to assess in detail every aspect of the lift including but not limited to:

> Size and weight of load, ground conditions, overhead risks, vicinity risks, length/height of offload, line of site delivery or out of site delivery, communication needs, slinger/signaller, multiple signaller offloads.

For complex lifts our AP may also be needed to attend site during the offload to ensure the plan is fully communicated to the site team and that test lifts are used to ascertain the readiness of the plan and the team.

Speak to us for more detail on lift plans.

Heated Storage

Our warehouse is heated throughout using a Biomass Boiler. We take in waste wood from around our area (via our Waste Transfer Licence) and chip and burn this wood.

The boiler is efficient and cleans all emissions pulling out anything harmful such as soot and particulate matter before sending anything in to the atmosphere.

Thanks to this, our warehouse stays toasty warm all year round, protecting our vehicles and stored goods at an ambient winter temperature of 18 degrees.

Training

Not only are all our Lorry Loader personnel fully trained by an ALLMI Lorry Loader Trainer, we also have an house fully accredited ALLMI Lorry Loader Trainer.

We offer the following courses:

Lorry Loader - Two Day Novice User Training

With minimal practical experience we can show you how to correctly check your vehicles loader for safety with pre-operational checks. Then teach you in a classroom environment the basics for a safe lift, what to look out for and best practice in all areas of Lorry Loader operation and safety before commencing practical training with a vehicle and crane.

Lorry Loader - One Day Refresher Course

Once qualified you will need to undergo refresher training every 5 years to keep your operators licence. This course will refresh you on all aspects of safe use of a Lorry Loader and update you on any industry wide changes such as the recent updated guidance on swing up stabiliser legs.

ALLMI Slinger and Signaller (Banksman) Course

The aim of this course is to give sufficient training in order to reach the required standard of both "Theoretical Knowledge and Practical Skill" along with required safety knowledge.

This course is suitable for delegates with limited or no previous experience.

Refresher Level Training is also available.
